

# Class 5: Data Visualization

Katie Hutzler

## Plotting in R

R has multiple plotting and graphics systems. The most popular of which is **ggplot2**

We have already played with “base” R graphics. This comes along with R “out of the box”.

```
head(cars)
```

	speed	dist
1	4	2
2	4	10
3	7	4
4	7	22
5	8	16
6	9	10

```
plot(cars)
```

Compared to base R plots ggplot is much more verbose - I need to write more code to get simple plots like the above.

To use ggplot I need to first install the ggplot package. To install any package in R I use the `install.packages()` command along with the package name.

The install is a one time only requirement. The package is now on our computer. I don't need to re-install it.

However, I can't just use it without loading it up with a `library()` call.

```
library(ggplot2)
```

```
ggplot(cars)
```

All ggplot figures need at least 3 things:

- data (this is the data.frame with our numbers)
- aesthetics (“aes”, how our data maps to the plot)
- geoms (do want lines, points, columns, etc...)

```
bb <- ggplot(data=cars) + aes(x=speed, y=dist) +geom_point()
```

```
bb
```

```
bb + geom_line()
```

```
ggplot(data=cars) + aes(x=speed, y=dist) + geom_point() + geom_smooth()
```

`geom\_smooth()` using method = 'loess' and formula = 'y ~ x'

## Gene expression example

```
url <- "https://bioboot.github.io/bimm143_S20/class-material/up_down_expression.txt"
genes <- read.delim(url)
head(genes,10)
```

	Gene	Condition1	Condition2	State
1	A4GNT	-3.6808610	-3.4401355	unchanging
2	AAAS	4.5479580	4.3864126	unchanging
3	AASDH	3.7190695	3.4787276	unchanging
4	AATF	5.0784720	5.0151916	unchanging
5	AATK	0.4711421	0.5598642	unchanging
6	AB015752.4	-3.6808610	-3.5921390	unchanging
7	ABCA7	3.4484220	3.8266509	unchanging

```

8   ABCA9-AS1 -3.6808610 -3.5921390 unchanging
9       ABCC11 -3.5288580 -1.8551732 unchanging
10      ABCC3  0.9305738  3.2603040          up

```

the `head()` function will print out just the first few rows (6 by default)

```
head(genes)
```

```

      Gene Condition1 Condition2      State
1   A4GNT -3.6808610 -3.4401355 unchanging
2    AAAS  4.5479580  4.3864126 unchanging
3  AASDH  3.7190695  3.4787276 unchanging
4   AATF  5.0784720  5.0151916 unchanging
5   AATK  0.4711421  0.5598642 unchanging
6 AB015752.4 -3.6808610 -3.5921390 unchanging

```

```
nrow(genes)
```

```
[1] 5196
```

```
table(genes$State)
```

```

down unchanging      up
   72      4997    127

```

```
ggplot(genes) + aes(Condition1, Condition2, color=State) + geom_point() + labs(title= "Som
```

Some plot  
With a subtitle

```
ggplot(genes) + aes(Condition1, Condition2) + geom_point() + labs(title= "Some plot", sub
```

Some plot  
With a subtitle

```
p <- ggplot(genes) +
  aes(x=Condition1, y=Condition2, col=State) +
  geom_point()
p
```

```
p + scale_colour_manual( values=c("blue","gray","red") )
```
